

## Butterfly valve wafer type - cod. 438W

**Butterfly valves** are characterised by a disc which can rotate on its own axis to cause closing and opening. They are cast iron, spherical-shaped components with epoxy varnish and stainless steel lens. They are mainly used in flanged connections and are ideal to be used in overheated water, wastewater or moderately aggressive liquids. The range of butterfly valves offered by Fitting Service includes **wafer butterfly valves** with drilled valve.

- **Laws:**
- **Materials:** GHISA - EPOXY
- **Application field:** High pressure piping
- **Suitable for:** Reattori, Distillatori, Siderurgia, Scambiatori high pressure, Oil & Gas, Bruciatori, Impianti di processo, Impianti di trattamento acque in osmosi, Reti distribuzione gas, Gestione reti distribuzione gas
